American Medical Software-EMR v22
Usability Rating

- Ready for "Meaningful Use"
- Routine Health Care Maintenance reminders
- Better patient care and reimbursement levels

From the moment the patient arrives at the office, the AMS system allows *full* electronic documentation to begin.

The Open Encounter screen tells the providers and staff where the patients are at within the office. It also identifies which patients have already been seen, it will display encounter details including diagnosis and procedure codes attached during the visit. This information is electronically sent to the biller to complete the charge transaction.

The Patient Chart allows easy access to all pertinent clinical information. Review previous encounter notes, test tracking data, current and past medications, evaluate and graph existing vital records, and view all electronic documents tied to the patient. It also allows for easy access to additional supplementary information including allergies, RHCM, problems, immunizations due, etc.

Document the reason for the visit along with all vital statistics. Vitals can be customized for each practice. Normal values can also be setup to alert if outside of the specified range. Vitals can then be graphed to screen or printed to quickly review with a patient.

Routine Healthcare Maintenance schedules can be setup specific to each practice. Schedules will default into each patient's chart that matches the specified criteria. Letters can also be created and sent to patients to remind them to schedule their Routine Healthcare Maintenance, generating additional revenue for the practice.

AMS understands that most providers have been practicing for years and have specific forms that they have been accustomed to. During the training process, included with the purchase of an AMS system, we will show each practice how to take their paper forms and create them as electronic documents. The only difference for the provider is that they are documenting on a computer instead of paper, making the transition from paper to electronic an easy process. Key phrases and conditionals are setup to allow a point and click type of entry for quick documentation. E&M coding can be setup with each macro/template to suggest the proper level of coding during the patient encounter.

Patient Education and Disease Management hyperlinks can be tied to each diagnosis code for easy printout during a patient encounter. You may choose to link to a specific web address or to your own in-house documents.

Depression Health Center

Depression - Treatment Overview

Depression can be treated in various ways. Counseling, psychotherapy, and antidepressant medicines may all be used. Lifestyle changes, such as getting more exercise, also may help.

Your doctor or mental health professional will help you find the best treatment. For severe depression, a very small number of people may need to stay in a hospital for a short time, especially if they are thinking about suicide.

Work with your health care team to find the best treatment for you. To get the most benefit, be sure you find a therapist who has experience treating people who have depression and who is trained in proven therapies, and use your medicines as your doctor directs.

- If your depression is mild, you may need only therapy.¹
- If you have moderate to severe symptoms, your doctor probably will suggest medicine and/or therapy.
- If you are using medicine, your doctor may have you try different medicines or a combination of medicines. Evidence shows that adding medicines to therapy for severe depression works better than therapy alone.²
- You may need to go to the hospital if you show warning signs of suicide, such as having thoughts about harming yourself or another person, not being able to tell the difference between what is real and what is not, **losing touch**, or using a lot of...

FEATURE 5 Painful Signs of Depression

Done

Tests and x-rays can be quickly ordered during the encounter. A requisition form may be generated to hand to the patient as they walk out the door. Quickly import electronic lab results into the AMS system for the provider's review and electronic signature.

All documented results can either be graphed, generated on a grid or printed in a lab report format.

Electronic documents are key to a paperless office. AMS allows you to import a wide variety of documents. You may choose to import diagrams that can be easily marked on, Dicom images, x-rays, pictures or paperwork that you would like to store electronically in a patient's chart for easy access and retrieval. Our scanner queue allows multiple documents to be pulled in at one time and attached to a patient's chart.

Upon completion of the encounter, the diagnosis and procedure codes that were selected during the visit are electronically sent to the charge screen for instant retrieval by your biller. No need to re-key co-pay/pre-pay information taken during check-in or re-enter diagnosis and procedure codes previously selected during the encounter. This removes the need to generate paper superbill encounter forms saving the office time and money. If you outsource your billing, AMS generates an electronic encounter report that can be easily emailed or faxed itemizing everything needed to create a charge encounter.

The Word Processor/Report Writer is a valuable tool for any practice. Quickly generate case study reports or letters to patients matching specified criteria. Report templates can be saved and easily accessed for instant retrieval. You can search on a combination of demographics, supplementary data, encounter notes, prescriptions, tests, RHCM, vaccinations and more for an unlimited combination of reports or letters.

The screenshot shows the 'Word Processing / Report Writer' application window. The title bar includes standard window controls and the application name. The menu bar contains: File, Daily, Export, Lists, Pt Chart, Tasks, Templates, Encounters, Rx, Image, WP, Modules, Help. The toolbar features icons for home, print, settings, user, search, templates, reports, and help. The main area is titled 'Word Processing / Report Writer' in a blue header. Below this, the form is organized into several sections:
 - **Patient Information:** Fields for Patient, Social Sec., Last Name, First Name, MI, City, Patient Type (dropdown), Patient Ethnicity (dropdown), Patient Chart Num., State, Zip Code, and Patient Sex (radio buttons for Male, Female, No Sch).
 - **Employer/Provider Information:** Fields for Employer Name, Occupation, Date Patient Added (From/To date pickers), Provider Last Name, First Name, MI, Referral Last Name, First Name, MI, Date of Birth (From/To date pickers), and a checkbox for 'Search on Birth Month Only'.
 - **Pharmacy/Facility Information:** Fields for Pharmacy, Pharmacy Name, Facility, Facility Name, Recall Date (From/To date pickers), and Default Diagnosis.
 - **Default Procedure:** A table with columns: PrvCls, InsCls, Procedure, Mod, Description.
 - **Communication Preference:** A dropdown menu and date pickers for 'Apt From' and 'Apt To'.
 - **Navigation Tabs:** Patient Demographics, Supplementary Info, Encounter Notes, Medications, Allergies, Test Tracking, Vitals, Vaccinations / Injections, RHCM, Problems.
 - **Action Buttons:** Open Template, Save Template, Begin Search, Clear Search, Exit.

American Medical Software

American Medical Software provides "Affordable & Reliable" medical office software solutions to physicians in all specialties. Since 1984, we have implemented and supported our systems in thousands of medical practices throughout the nation.

American Medical Software's premier system, "Practice Management ULTRA" is the ultimate in medical office software. It offers integrated workflow throughout the practice. This package features Appointment Scheduling, Electronic Medical Records with e-Prescribing, Billing with e-Claims filing and much, much more. These modules are also available as standalone systems.

For further information, to schedule a demo or to simply obtain a list of clients who have successfully implemented the AMS Practice Management System, contact American Medical Software at:
